

that *THE DEAN CASE*

SIR HILTON RATON, M.P., DIRECTOR

Sir Julius Salomons has, we are informed, written from some of the highest judicial and administrative in Australia letters containing the most timely expressions of approval of his contribution to the disclosures relating to the Defence Force's concurring absolutely with the advice given by Julian by Sir Frederick Darley.

**EXAMINATION OF THE BOOKS
ANALYSIS NOT COMPLETE.**

Mr. Hamlet, the Government Analyst, has completed the analysis of the soil in the chimneys of the house, which was made up of parcels, and each of these has to be examined. This necessarily takes some time, and, it is said, that Mr. Hamlet's report will be ready tomorrow. It is understood, however, that

THE CHARGE OF CONSPIRACY
The Attorney-General is absent at Boston and is not expected back till tomorrow. Some of the Crown are, therefore, not yet known. An impression exists that the case will not be pressed, at any rate, at the accused; but this appears to be a very rare the function of the Attorney-General, in deciding whether the case is to be proceeded with, and it is not the conclusion of the police or the prosecution, or the committee of one or more of the accused.

A resolution is to be presented to North Sydney (Alderman (C. J. Barry) call a public meeting for the purpose of fund to assist Mrs. Dean and her child received in S. L. L. Muswellbrook

(FROM OUR CORRESPONDENTS)

MEETINGS.

PROPOSED FRIENDLY DEMONSTRATIONS
A meeting of delegates from twenty friendly societies was held in the hall of the G.U.O.O.F. on Tuesday evening, the 10th inst., for the purpose of initiating a grand annual demonstration of the kind which has been held in the past by the B.O.M. and on the following day, the 11th inst., the following officers were elected:—
Chairman, J. F. Smith was elected president and took the chair. The scheme laid before him and endorsed was that on the day proposed a demonstration and sports meeting should be held on the grounds of the Royal Agricultural Society, Moore Park, and that the League of the Cystitis Sufferers should be invited to participate in the sports. It was also decided that the following bodies should be asked to come into the demonstration:—The G.U.O.O.F., the Volunteer Firemen's Association, the G.A.S., the G.A.S. and the G.A.S. The demonstration was asked to allow their members to have petitions of their own. Any profits that might be realized from the demonstration will be divided equally among the societies.

Members of the Board of Directors, Messrs. Forbes, Hall, and Grace were presidents. Messrs. Dorman and H. trustees. Messrs. E. Stedman and P. auditors. Mr. James Finch, general se- Mr. H. Ratton, financial secretary. already 70 societies represented, and that others will come into the demonstra-

NATIONAL L. B. and L. COM

On Friday evening an adjourned meet- sons with the National Land, Building, and Mortgages Company, Limited, was held at since Hall, to consider the question of interest, and a further extension of time ment of the principal, Mr. E. A. W. president. A committee of depositions was to investigate the position of the society.

PARLIAMATIA DISTRICT HOSPITAL

The monthly meeting of the board of trustees of the Parliamatia District Hospital (Archdeacon (Gautier) presided) revealed that the fixed deposits be transferred to the Government Savings Bank. It was decided that the Government had only allowed a subcommittee of the Hospital Saturday Fund donations to be made. The trustees thought that if this rule were adhered to, the Government it would mean a blow to the hospital as it depended on the voluntary contributions of the whole of the revenue required to carry on the hospital. The management would be derived through the trustees. The secretary was instructed to write to the Government of the Hospital Saturday Fund, with a view to having the matter brought before the secretary. Nurse Julia Pöcher was appointed to hold by Nurse Alipreza, resigned.

EXPERIMENTS IN TIMING ITS
(*San Francisco Chronicle*)

Students of psychology must feel debt to E. W. Sanjuro, director of the psychology department at Yale University, who labored the results of years of careful work in the science of measuring thought. The volume is entitled "Thinking. Feeling. Doing." The author has the great distinction of first book in the English language dealing with the science of experimental psychology.

The experiments carried out at Yale during the past three years have resulted in a covering of many facts interesting and useful to scientists but to the world at large. "Thinking. Feeling. Doing" is the advice recommended

One can, therefore, readily understand why persons who can think faster than another have an advantage in the struggle of life. Those who have occupied the attention of Frobenius and his co-workers have been busily occupied, finding the difference of time in thought.

To the ordinary observer, "to think is to act" is really not the case. When the idea to do or say anything, the action required, is not instantaneous, the action is not the thought is not instantaneous. It is not that a portion of time elapses between the thought and the action in carrying out

Even the winking of the eyelid is not in itself with the thought, and so with any action. The interval of time varies in different persons. When a number of children in school stand up they do not all rise at the same time, but that their minds vary in their response to the teacher's command. The mind will and the act may apparently occur at the same time, but "apparently" is a word not so in the dictionary of the new psychology.

The experiment of measuring thought is the most beautiful and accurate of any carried out by psychologists. The first thing done is to set up a fork, not a little different from the tuning fork, which vibrates 100 times a second. A means of a battery and a magnet is the cause of the vibrating. Every time the lower prong rises, a point on the end dips into a cup containing an electric circuit. The elec-

which makes a little pointer move back 100 times a second. The pointer of the rests on a surface of smoked paper on a drum. As the drum revolves the pointer draws a wavy line, 100 waves to the second. Each represents one-hundredth of a second. If a dot be placed on the line, the finger is moved, and another dot is placed, by counting the waves between the dots, and the fractions of the exact interval of time between movements is recorded in hundredths of a second. By means of special telegraph operate pointers resting on the smoked paper, the exact instant when the movement is recorded. The time taken by the electric current to move cannot be measured, for it is so small that

recorded or even conceived by the hand.
Hence the expression, "Quick as a lightning."
By means of the apparatus it is therefore possible
to measure the difference of time which
elapses between the touching of the keys with
the right and left hands at what may seem to be
the same time. The wave line shows the position of the
second, the position of the dots
the position of the first, the position of the
hands touching the telegraph keys with
the difference of time elapsing in touching.
This proves that the will is more
active than the time results in moving the two
hands.

To train the mind to act quickly is a
essential factor in expert telegraph opera-
tion; the mind can cause the fingers to
move more work will be done.

For the mind to react takes time.

British Astronomer discharged his assistant in recording the passage of a star across the telescope, the assistant varied from by eight-tenths of a second, and was careless. The poor fellow was not in his mind was simply acting eight-tenths slower than that of the Royal Astronomer.

Betting on races is a risky thing, for runners may get off exactly at the same far as the eye can tell, such case. By placing a spring over the starter's pistol, which breaks an elec when fired, and attaching a thread to the breaking of which when he makes the start in a similar manner, the difference of time
